

Marcy/1st Street Reconstruction

Highlights

The City is conducting a street reconstruction project on W. Marcy Avenue from Main Street to 1st Street and on 1st Street from W. Pioneer to Marcy Avenue. The City will also be completed some street repair work on Crass Court during this project. The project was awarded to Rognlin's, Inc and work will begin during the middle of July 2020. The project is expected to be substantially complete by the middle of September. Traffic in this project area will be limited to local access only during working hours. The contractor will maintain pedestrian access to businesses to the extent that is possible.

Why is the City Repairing these sections of roadway?

The pavement is old and the driving surface is failing in several areas. Sidewalks within the project area are in disrepair and curb ramps need to be updated to meet ADA requirements. Storm drainage also needs to be upgraded and an old STEP sewer system tank will be replaced.

The End Result

- Pavement and sidewalks along Marcy Avenue from Main Street to 1st Street will be replaced.
- Pavement and some portions sidewalks along 1st Street from W. Pioneer to Marcy Avenue will be replaced.
- Additional street trees will be installed along Marcy Avenue.
- Storm drains in the area will be improved.

Timing of construction (subject to changes and updates)

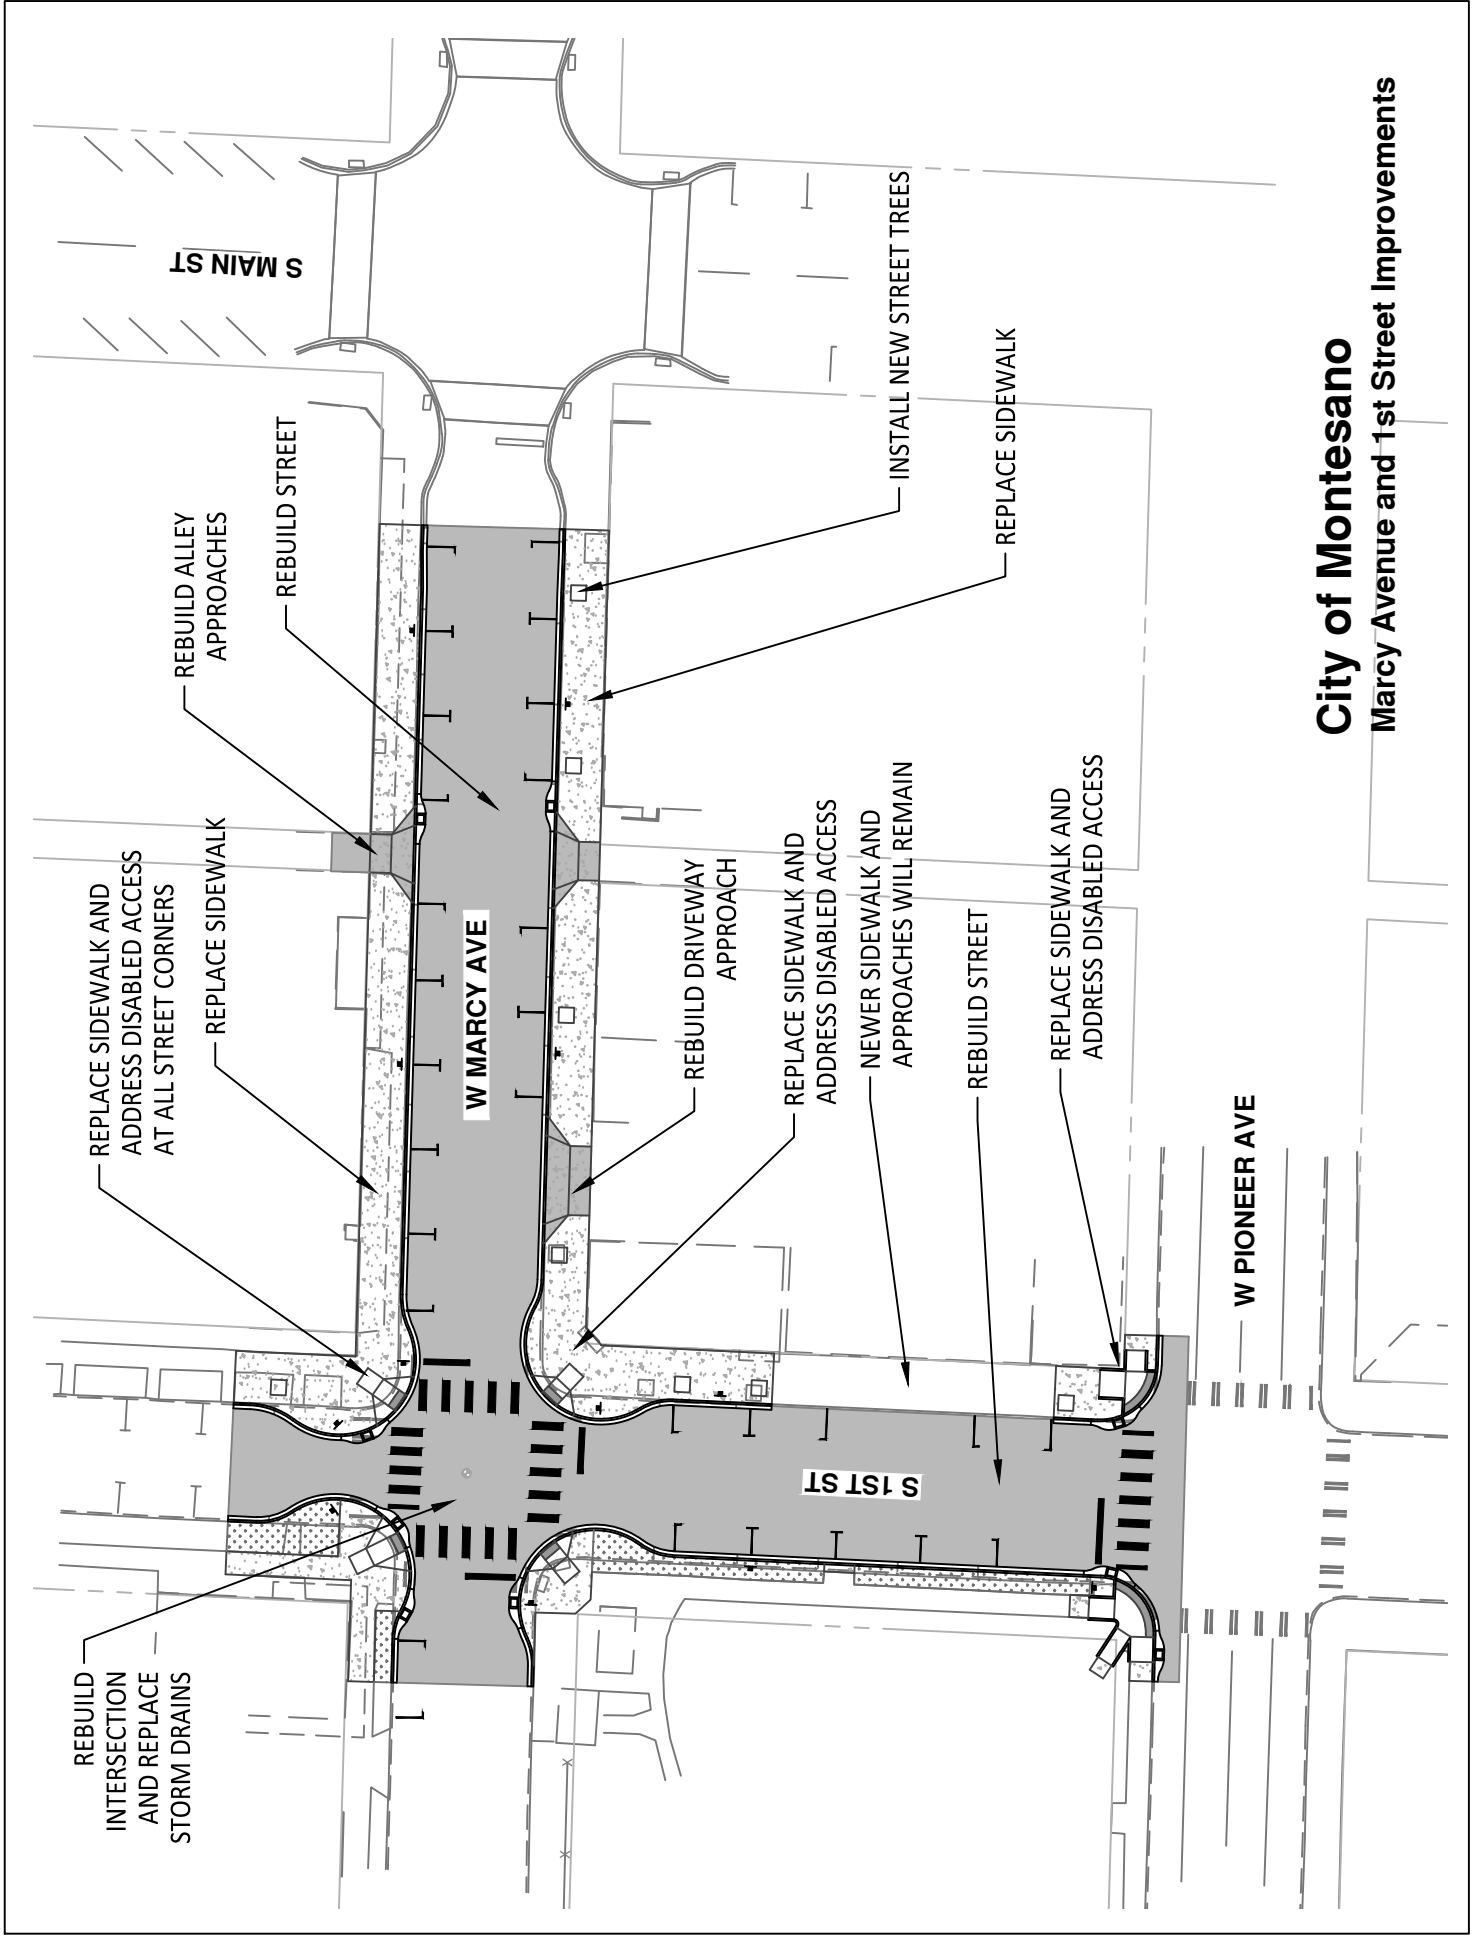

- Work is tentatively scheduled to begin on July 13th and last through the end of August and possibly through mid-September 2020. Work will initially commence on 1st Street.

Funding

This project is funded by a \$450,000 grant from Washington State Transportation Improvement Board (TIB) and \$52,500 combined from the City's General Fund, Storm Water Fund and Real estate excise tax fund. Sewer tank replacement work will be conducted under a separate bid schedule and will be paid for with sewer funds.
